

# DELIVERY AUTOMATION

Speed delivery with DevOps including environment, test and pipeline automation.

Whiteboard People provide coding, scripting, process re-engineering and collaboration across the pipeline to production and operations. Includes on-demand cloud environment creation and teardown, test automation frameworks, and continuous integration and continuous delivery build pipelines.

## Why is delivery automation important?

Customers' expectations of high quality, high value products are growing. So are their choices. Organisations need to be able to test new ideas quickly and follow shortly after with viable features to satisfy customers. Technical practises such as DevOps including environment, test and pipeline automation enable these ideas, products and services to flow to customers quickly and reliably.

## What types of services are available?

- ✓ Push button cloud environment creation and teardown
- ✓ Automation Test Framework creation around core business processes
- ✓ Automated Test data and test case creation and execution at scale
- ✓ Environment and Application Configuration scripting
- ✓ Continuous Integration and continuous delivery build pipelines

## What do I get delivered?

- ✓ Ability to speed ideas enhancements and new features to customers
- ✓ Improved quality of products enhancing customer experience and retention

## Why choose us?

Whiteboard People have deep experience automating many of the repeatable steps of the delivery pipeline for other clients in Brisbane such as RACQ, Virgin and MindHive to name a few. We build quality in and collaborate with our customers to take everyone on the journey. We have worked with many legacy platforms and understand these may not of necessarily been designed for testability so we work with you to tactically to interact with these systems to demonstrate immediate results and strategically to build out APIs to future proof the ability to test and release changes quickly and reliably.
